1. Confidentiality policy: Identifies transactions in which data flows to people who are unauthorized to see it

   Integrity Policy: What changes can be made to the data and who is allowed to make those changes.

2. RBAC: Hybrid Policy

3. Main advantage to RBAC: Reducing the amount of data, less work for the administrator.

4. ACL vs CL vs AuthTable
   ACL - Hard to find what objects
   CL - Hard to find what permissions an individual user has
   AuthTable - Centralized, security implications

Question 4:
   - KDC vs PKI

KDC:
   -
